

Streamline Your Security Reporting

Easy as 1, 2, 3

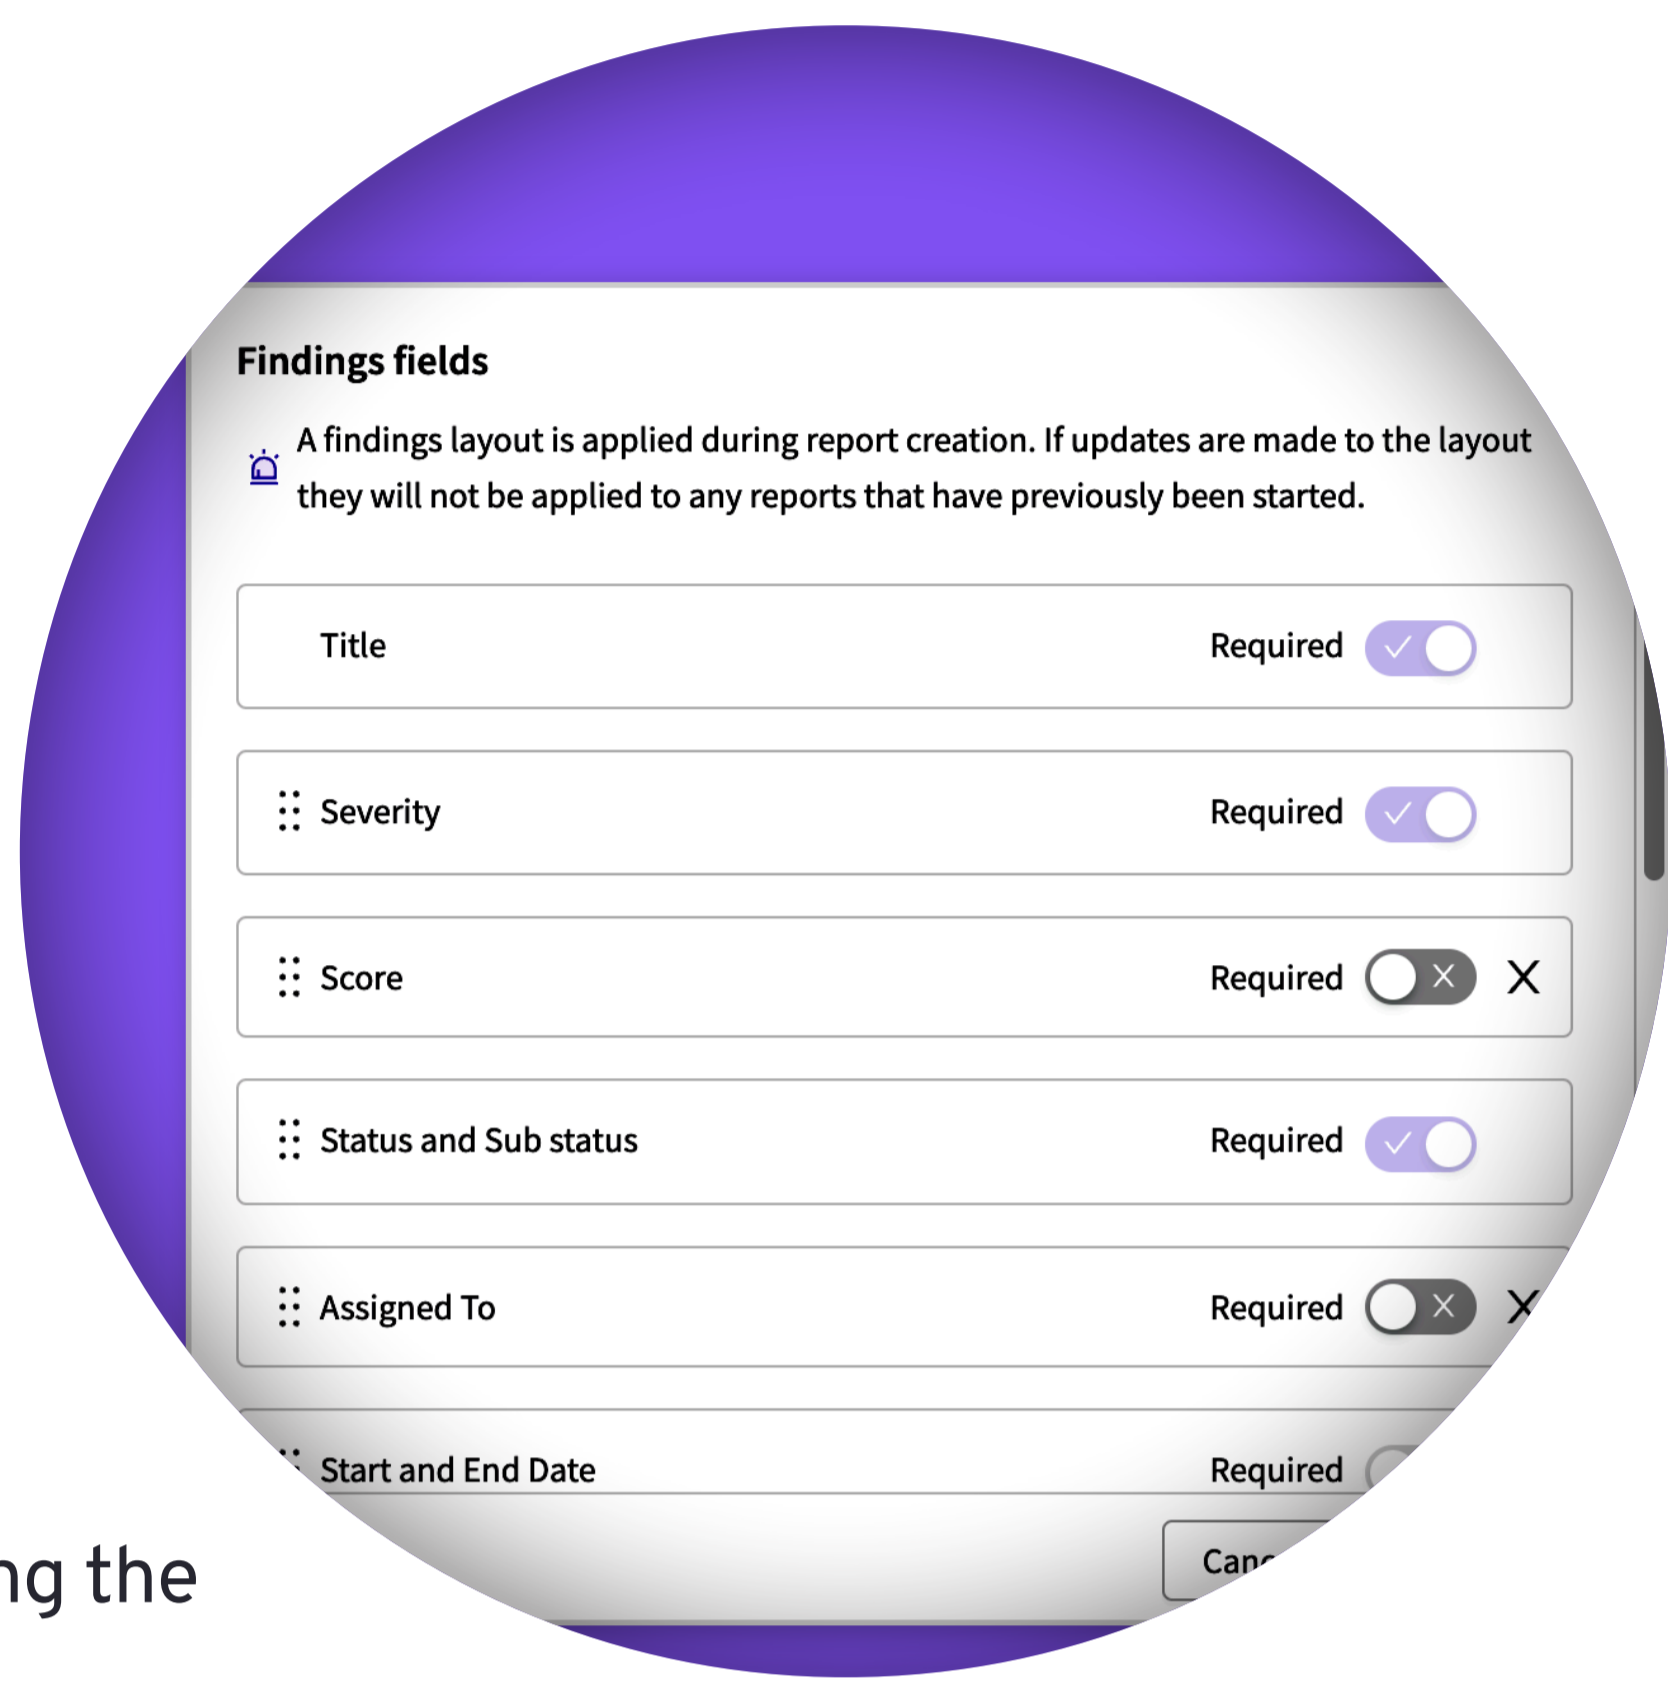

Transform your security reporting workflow with automation that saves time while adding value to your stakeholder deliverables.

Whether you are producing pentest reports for clients at your MSSP or documenting internal testing efforts for leadership with your enterprise security team, efficiently customize your findings delivery – **no code required**.

1 Configurable findings layouts

Add, remove, or reorganize findings fields for a custom user view

Streamline report authoring and operator onboarding by setting findings layouts to your team's preferred requirements. For MSSPs, curate clients' experience of findings through the client portal by customizing the order and visibility of fields.

2 Customizable style guides

Set a brand style across templates to streamline your reporting workflow

Drive consistency and free up pentesters and more technical resources to focus on the actual content of the report while other team members set and apply style customizations to report templates.
