Context Is Key

Unlock the potential of your offensive security program with context-based risk scoring.

1.

Endless Vulnerabilities Make Prioritization Tricky

Remediating vulnerabilities is the key to improving your security posture or your stakeholder's security posture. But with endless vulnerabilities coming in from different sources – vulnerability scans, red team assessments, pentests, risk assessments, etc. – it's hard to know which vulnerabilities to tackle first.

2.

The Common Vulnerability Scoring System Is Not Enough

The Common Vulnerability Scoring System (CVSS) is used to rank Common Vulnerabilities and Exposures (CVEs) on severity. The scale, which goes from 0-10, determines if a vulnerability's severity if exploited is low, medium, high, or critical. It's a good starting point for determining which vulnerabilities to prioritize, but it doesn't account for the unique needs of organizations.

3.

Context-Based Scoring Is the Key to Effective Prioritization

Context-based scoring is a configurable scoring equation that measures vulnerabilities against a set of selected criteria — such as asset criticality, finding severity, tags, etc. — where each variable may have a weight applied to influence the contextual score and determine the true impact an issue could potentially have on the business. In other words, it can incorporate the CVSS along with multiple other variables.

4.

There's Only One True Context-Based Scoring Engine on the Market

As of today, PlexTrac Priorities is the only true configurable context-based scoring engine on the market. Other solutions in the space offer limited configurability and don't provide the same level of visibility into risk factors.

5.

PlexTrac Priorities for the Win

PlexTrac Priorities enables you to pinpoint the fixes that will make the greatest impact on your security posture, or your client's security posture, without the need for additional resources. It empowers security service providers and enterprises to prioritize risks based on real business impact, assign and track remediation efforts, and prove the effectiveness of your security program with real-time analytics.

Claim Your Key to Success

If you're ready to improve your security posture, or your client's security posture, request a demo of PlexTrac Priorities.
